# Project Management with AI

The training "Project Management with AI" provides a step-by-step guide on how to leverage the potential of artificial intelligence in the daily work of a project manager — from initiation and planning, through execution and monitoring, all the way to project closure.

Participants learn how to create project documentation using AI, optimize schedules and budgets, automate routine processes, analyze project data, and collaborate effectively with digital assistants. Special attention is also given to ethical considerations and the responsible integration of AI into team-based work.
This training is designed for individuals who not only want to stay up to date, but also actively shape the future of project management.

PMI Talent Triangle

Duration	**1**	day = 8 h
	8	PDU's

Level: Basic

Form: lecture, group exercises, case studies

Certificate: : PMI® ATP

Training Objectives

The training course "Project Management with AI" introduces participants to the fundamentals of using artificial intelligence in projects. Participants will become familiar with key AI concepts and tools, and will learn how to:

- identify areas for applying AI across the project lifecycle,
- enhance project processes with the help of AI,
- use AI in daily work – from task automation to data analysis,
- collaborate with AI as a digital assistant,
- manage a team in an AI-driven environment.

Training scope

- Presentation of the agenda and expected learning outcomes
- Key AI concepts and technologies relevant to project managers
- Preparation of a project concept using AI
- Development of a project charter with AI support
- Definition of project scope
- Creation of the project schedule
- Assignment of resources
- Budget planning
- Communication planning
- Risk management planning
- Team management with AI support
- Cooperation with AI as a virtual assistant
- Automation of routine administrative tasks
- Ethical aspects and challenges related to the use of AI
- Monitoring project status using AI
- Reporting with the help of AI
- AI in project data analysis and risk prediction
- Change management using AI
- Handover of project deliverables to the organization
- Summary and archiving of knowledge gathered during the project
- Preparation of the project management summary
- Summary of teamwork
- Ethical aspects of AI application – best practices
- Q&A session
- Individual knowledge implementation plans
- Knowledge assessment exam for participants
- Training evaluation and conclusion

This training is recommended for

- Project managers looking to enhance their skills in the context of AI,
- Business leaders overseeing projects and making decisions on AI technology investments,
- Beginner project managers and team members aiming to build careers based on modern tools,
- Product managers who want to use AI more effectively in the development of digital products,
- Business consultants advising on process optimization with the use of AI.

Languages and locations

Training sessions are conducted in Polish or English, both online and in person. Regardless of the chosen form, we guarantee high quality teaching and a strong focus on practical aspects of project management. We also offer customized private training, tailoring the location and program to meet company needs.

Delivery guarantee

Training is confirmed 14 days in advance. If the minimum number of participants is not met, the training may be postponed or canceled. Participants who have already paid can choose a new date, a different topic, or a refund.
